Why Choose IDrive Online Backup?

- **Military Grade Security** - We use 256-bit AES encryption with an optional private key.
- **Users** - Add unlimited users within your storage space and monitor via a centralized administrator console.
- **Server Cloud Backup** - Backup SQL, Exchange, Hyper-V, SharePoint, Oracle, Microsoft 365 Mailbox, VMware, and Linux servers.
- **Google Workspace and Microsoft 365 Backup** - Secure your organization's Google Workspace and Microsoft 365 account with daily incremental backups.
- **Linux Server Backup** - Backup connected Linux machines remotely via the GUI on the web interface or individually using the IDrive scripts package.
- **Clone / Computer Backup** - Perform sector-level or file-level backup to secure the entire computer, and restore it to its initial state.
- **IDrive® Thin Client** - Deploy the IDrive® Thin Client application on your computers with minimal configuration and enable data backup via the web.
- **Manage Computers** - Manage data backups, restores, application settings, etc., on your distant computers via a web-based console.
- **IDrive Express™** - Quickly backup and restore data via physical shipment of the Express device. The service is free 3X a year for business users.
- **Single Sign-On** - Configure your IDrive® Enterprise account for SSO with any IdP of your choice and enable hassle-free sign-ins.
- **Business Compliance** - Assistance to comply with regulations like HIPAA, SOX, GLBA, SEC/FINRA, and PCI DSS.

How Secure is IDrive Online Backup?

- Your data is encrypted with military-grade 256-bit AES encryption on transfer and storage. On signup, you can choose a private encryption key, known only to you and not stored anywhere on our servers.
- Your data resides at our data centers built to withstand natural disasters and monitored 24/7/365 against physical and network security threats.
